# CmapTools Install Guide

Download and install Cmap Tools or use a CHBE computer lab computer

1. Cmap Tools is a free software that allows you to build concept maps.
2. It can be downloaded at https://cmap.ihmc.us/cmaptools/cmaptools-download/
3. The page will ask you for personal information, but there is no need to donate, or provide personal information if you do not wish. For example, I entered the following (below) to get access to the download.

4. Once you download the installer for your system, run it and install the default for Cmap tools.
5. When starting the software it may ask you for a username and password, you can again use non-identifying information for this, the password will not be used for the purpose of this course as there is no need to share your Cmaps online.
